The prior art fails to teach or suggest a computer implemented method for generating a transparent sheet bearing signs in proper spatial alignment with text in a printed matter, the method comprising the following steps: a. scanning the printed matter such in a way the text is restored in a file; b. obtaining a database comprising a list of signs to be incorporated into the said text; c. retrieving a character or a plurality of characters from the said text file; d. retrieving a sign or a plurality of signs from the said database; e. creating a conjugated character-signal couple from each of said character and said each of said signs f. comparing said conjugated character-sign couple with a reference character-sign couple; g. fitting said conjugated couple such in the way that all the text is aligned with signs, optionally said fitting is by a feed-back loop; h. presenting the printed text with the aligned signs as claimed in claim 11.

The prior art fails to teach or suggest a computer implemented method for generating a transparent sheet bearing signs in proper spatial alignment with text in a printed matter, the method comprising: generating a file containing data representative of text in the printed matter; obtaining a database comprising a list of signs to be superimposed on to text in proper spatial alignment with respect; for each character in the text having one or more signs associated therewith; creating a conjugated character sign couple from the respective character and associated one or more signs; obtaining a reference character sign couple corresponding to conjugated character

sign couple; determining a spatial alignment of each of the associated signs in the conjugated character sign couple relative to the character in the conjugated character sign couple so as to match a relative spatial alignment of character and signs in the corresponding reference character sign couple and visibly rendering each of the associated signs of the conjugated character sign couple on the transparent sheet according to the spatial alignment as claimed in claim 20,23.
